

# Quick Guide to the New OT Eval Codes

## Evaluations

## Code

## Components

Low Complexity

97165

- Brief medical history
- Assessment identifies one to three performance deficits
- Required clinic decision making is of low complexity

Moderate Complexity

97166

- Expanded review of medical history
- Assessment identifies three to five performance deficits
- Required clinic decision making is of moderate analytic complexity

High Complexity

97167

- Occupational profile and medical and therapy history
- Assessment identifies five or more performance deficits
- Required clinic decision making is of high analytic complexity

Re-evaluations

97168

- Assessment of changes in patient functional or medical status
- Update of initial occupational profile to reflect changes in condition
- Revised plan of care
